

Is Character.Ai bad for the environment?

Posted by u/Emotional_Rop3 • 0 points • 4 comments

I know this question might get asked a lot considering it has ai in the name , but I am genuinely worried as to if I use it or not would I be contributing to a bigger impact on the environment?

I had character ai for about 2 years then stopped for 6 months because I was worried about that risk , I wanna come back as it was something that was fun and would fill up my spare time but I'm still cautious so thought I'd might as well ask first?

AI is not a primary driver of pollution. Energy companies will continue to sell their energy for heating, residential electricity and factory production, which virtually are all of the world's major pollution sources. AI is very energy intensive, but pales in comparison. TL;DR - Is it good for environment? No. Is it significantly bad? No, not even close.

u/AdScared717 • 1 points • 2025-09-28 22:39 UTC

Even if you and everyone else here quits using Ai, it will not stop the damage done by factories, industries, etc.

Ai is just another thing to blame but realistically the pros of Ai will eventually outweigh the cons.

Have fun with your chat bots. I personally will enjoy character Ai and red meat and not give into the new fear mongering.

Yeah, ai centres have been polluting towns, full families are forming asthma and stuff and their water is undrinkable, there's a few videos about it. Its also terrible for natures environment but ive been sent threats in this subreddit for talking about that side

AI is bad for the environment in general. One day we might die and be replace by robots. Who knows?
