How much does C.AI and Clvitai hurt the environment?

Posted by u/Weak-Requirement8357 • 0 points • 6 comments

I use these and heard AI data centers hurt black communities

i don't want to contribute to that so how much do these two apps hurt the environment?

Comments

The only reason data centers would be a problem is if they are placed in dumb locations. I *could* believe maybe some have been allowed in spots they shouldn't have been placed, but overall its an issue of placing them near nuclear energy so that it's clean.

I can't imagine ai hurting specific races in particular. Maybe whatever you were talking about was about a specific location?

u/Tyler_Zoro • 1 points • 2025-10-03 19:57 UTC

You would be shocked at where they can reasonably go. I've visited a datacenter in the middle of a major city that housed everything from major ISPs to local point-of-presence for every major streaming service, and you would NEVER know it was there unless you used thermal imaging to look at their roof and saw that the HVAC was running hotter than anything around it.

??? You gotta be specific than just black community

u/MicroscopicGrenade • 5 points • 2025-10-03 19:07 UTC

AFAIK because one data centre was built without the proper permits people now believe that using AI basically means that you're in the KKK

u/MicroscopicGrenade • 11 points • 2025-10-03 18:48 UTC

AFAIK it's only xAI's data centre that's a problem

Using generative AI probably doesn't hurt Black people in general

u/Tyler_Zoro • 5 points • 2025-10-03 19:54 UTC

> AFAIK it's only xAI's data centre that's a problem, and that's because they didn't properly disclose how many gas turbines that they were going to build, or something.

It's been blown WAY out of proportion. They have a zoning beef with the city, which is fine, but the impact is absolutely negligible given that they built it in a place that has a nickname based on its elevated cancer rates due to heavy petrochemical industries. They're right at the point in the Mississippi where the river begins to bend to the northwest, and so any east-coast use of petroleum that is coming up from the gulf is processed there. THAT is the real issue. The xAI kerfuffle is being used by petrochemical companies as a PR shield since their impact on regional COPD and cancer rates made headlines in 2020.
