

Yikes: Renewable Energy Institute and Partners Launch AI Centre for Energy Innovation and Technology to Combat Global Climate Change

Posted by u/Significant-Cream-95 • • 0 points • 1 comments

I somehow got on this group's mailing list and this caught my eye this morning.

"This new initiative will harness the power of artificial intelligence to accelerate progress in renewable energy, sustainable technologies, and efficiency improvements across Europe. The Centre will act as a hub for research, training, and knowledge-sharing, supporting professionals, industries, and policymakers in adopting AI-driven solutions for the energy transition."

The whole thing is the usual AI-hype pabulum. What on earth is a chatbot going to do to "accelerate progress in renewable energy"?

AI is beyond LLM and diffusion model. People using other AI techniques like genetic algorithm to solve optimization problems.
