What can be done about the environmental impacts of (generative) AI?

Posted by u/Amazing_Assumption50 • • 0 points • 0 comments

This is something I've been thinking about a lot lately. Obviously non-generative AI can be a great tool when used alongside people rather than replacing people, but people obviously still use generative AI. and even non-generative AI has environmental impacts, like with the data centers and all. One thing I was wondering about was connecting AI to nuclear power to make it cleaner, if that's even possible. Since we don't run on nuclear power on a large scale currently, what else could be done?
