

Why don't ai datacenters use enclosed water cooling pumps (like those on gaming pcs) to cool their computers and thus save water?

Posted by u/Disastrous_Pattern_3 • 0 points • 1 comments

My guess would be that it is too expensive/inconvenient to implement & do maintenance on, but wouldn't it save money in water costs in the long run?

Thanks for your submission /u/Disastrous_Pattern_3, but it has been removed for the following reason:

****Rule 2: Please try to use the search function before posting anything.****

Thanks for posting, but this question happens to be one that has been asked and answered here often before - sometimes in the same day! That can get frustrating for our dedicated users who like to answer questions. Or maybe you're just asking the same question too often - why not take a break for a while?

Sometimes questions that come up too often get put in our [Most Frequently Asked Questions list] (<https://www.reddit.com/r/NoStupidQuestions/wiki/index/faq!>). Other times, it may just be that we're getting a flood of questions about a topic (especially when something is in the news). Or maybe you keep asking the same question again and again - something that annoys our users here. Please don't do that! Next time, please try searching for your question first before asking. Thanks!
