

How does a data center in a desert create double the amount of water it uses?

Posted by u/hgwelz • • 0 points • 119 comments

"We strive to be good water stewards in communities where we have data centers. That's why we plan to use a closed-loop, liquid-cooled system in this data center that will use zero water for a majority of the year. We've also set an ambitious goal for ourselves – we aim to be water positive in 2030, meaning we'll restore more water than we consume. And in El Paso, will restore 200% of the water consumed by our El Paso Data Center to local watersheds. "
