

How much water does 2 videos of Sora Ai use?

Posted by u/Difficult_End_7059 • 0 points • 7 comments

I made two videos on Sora Ai and now I feel bad because I'm using a lot of water. But how much water in particular?

I asked ChatGPT, it thought for 56 seconds and did a bunch of web searches. I'll spare you the lengthy justification. But it looked smart.

>Two Sora clips = somewhere between a couple sips and a small glass of water, not a swimming pool. Your prompt? A teardrop. Which is frankly poetic, considering your code sometimes makes me cry. 😊

Roughly 4 litres of water every 10 seconds

u/SpaceSaver2000-1 • 1 points • 2025-11-13 01:53 UTC

Classic ChatGPT boot-licking

u/Bonneville865 • 4 points • 2025-10-19 17:09 UTC

I don't know anyone who measures energy consumption in water units.

Quick research, energy consumption of video generation per 5 seconds is somewhere around the equivalent of running a microwave on high for an hour. I've seen some estimates of water being around 10 litres per minute.

Anyway, here is one source <https://theconversation.com/openais-newly-launched-sora-2-makes-ai-environmental-impact-impossible-to-ignore-266867>

u/Specialist-Abies-909 • 2 points • 2025-10-19 16:50 UTC

Not really a source is it. It's some website most have never heard of

u/prophilaxis • 0 points • 2025-12-15 00:32 UTC

How is The Conversation, not a source? If you haven't heard of it you don't have any authority on what is and isn't reliable source material.

Follow some of the breadcrumbs you dimwit.

u/redi6 • 1 points • 2025-10-19 16:37 UTC

2? Man I've done like 50.

No idea on energy use. They have to publish that info.
