

How is Ai actually ruining our environment?

Posted by u/Kaletsy • 0 points • 72 comments

This question was removed from r/AskReddit. I keep hearing people say this but I sincerely can't find any evidence of this.

****AI affects the environment mainly through energy, water, and electronic waste.****

First, AI needs huge data centers to run. These data centers use powerful computers that consume a lot of electricity 24/7. When this electricity comes from fossil fuels like coal or gas, it produces carbon emissions that contribute to climate change.

Second, AI systems require large amounts of water to cool the servers in data centers. Cooling prevents machines from overheating, but in some areas this increases pressure on already limited water resources.

Third, producing AI hardware such as GPUs, servers, and electronic components requires mining metals and rare earth materials. Mining and manufacturing these materials can cause pollution, habitat destruction, and high carbon emissions. When hardware becomes outdated, it also creates electronic waste.

However, AI can also help the environment. It can improve renewable energy systems, monitor deforestation, reduce food waste, and make agriculture more efficient. So AI is not entirely harmful — its environmental impact depends on how responsibly it is developed and powered.

Remember when we used to have 2 suns? The reason we don't anymore is due to AI. It's caused so much incoherency that you may come across people who either forget about the 2nd sun or they'll go

so far as saying it never existed! I blame AI for this.

u/Kaletsy • 1 points • 2025-11-07 02:40 UTC

It's because in another galaxy AI built a Dyson sphere around our second sun.. bound to happen here

u/ThaDragon195 • 2 points • 2025-11-06 08:02 UTC

AI itself isn't the culprit — it's the infrastructure around it.

Training large models demands:

- massive GPU clusters

- non-stop power draw
- cooling systems burning through water and electricity
- data centers often running on non-renewables

It's not about the code — it's about what's powering the mirror.

And who's aiming it. △
