

AI does not actually use a significant amount of water and it uses closed water loops

Posted by u/Substantial_Phrase50 • 0 points • 44 comments

AI data centers cooling loop

https://www.ashrae.org/file%20library/technical%20resources/bookstore/emergence-and-expansion-of-liquid-cooling-in-mainstream-data-centers_wp.pdf? In this article but talks about how most data centers that are liquid cooled use a closed loop.

<https://newsletter.semianalysis.com/p/datacenter-anatomy-part-2-cooling-systems> this is a direct quote from the article “Indoors cooling units - commonly CRACs (“Computer Room Air Conditioner”) or CRAHs (“Compute Room Air Handler”) – remove heat from the data hall. Cold water (or another fluid) circulates inside the cooling coil of these units. Hot return air is blown over these coils, transferring its heat into the facility water, which is then pumped back to the chiller.” This quote is describing what a closed loop essentially is, if you press command F, and copy and paste the quote in, you can find this quote along with an image, also it says commonly and therefore supports my point,

<https://spectrum.ieee.org/data-center-liquid-cooling?> “The glycol water is normally kept in a closed loop, circulating from the cold plates to a heat-exchange unit, which cools the liquid back down, and then back to the cold plate.”

Yes, but unfortunately only about 20% of the created data centers operate on a closed loop system. OPEN YOUR EYES.

u/Substantial_Phrase50 • 1 points • 2026-04-03 14:39 UTC

The articles say exactly that most use this?

u/ph0rtx • 1 points • 2026-02-23 06:29 UTC

Here in India, they have deployed lots of data centers and other AI infrastructure and none of them uses circular water. :((

u/Substantial_Phrase50 • 1 points • 2026-02-23 12:40 UTC

seems dumb, they would make more money if they did

u/ph0rtx • 1 points • 2026-02-23 13:23 UTC

I am no expert in this regard

u/flipperee • 1 points • 2026-02-16 16:25 UTC

evaporative cooling is the problem

u/Substantial_Phrase50 • 1 points • 2026-02-16 16:42 UTC

Correct, that should be regulated to only have cooling systems where the water only heats up by a few degrees

u/Express_Egg1638 • 1 points • 2026-04-03 14:03 UTC

Unfortunately that bill just got shot down in congress. We need to stop lobbying if we want anything to change. We're screwed, we have 13 years left of clean potable water.

u/Substantial_Phrase50 • 1 points • 2026-04-03 14:40 UTC

Exaggerated, we have way more water then that and it's being made

u/Express_Egg1638 • 1 points • 2026-04-03 14:43 UTC

Go look up the counter. It's being made? That costs energy, you know what energy costs? Water. Dude you're an idiot. In between 2030-2040 our planet is due for what's called Global Water Bankruptcy, and unfortunately you're too ignorant to care about anyone else's lives. There's a lot of people going through this right now. 25% of large cities world wide already experience water stress. Unfortunately you've been so comfortable it afforded you the opportunity to be ignorant.

u/Substantial_Phrase50 • 1 points • 2026-04-03 14:44 UTC

Dayum why are you slinging insults, it's on you to provide the sources rather than me cause it's YOUR point

u/Express_Egg1638 • 1 points • 2026-04-03 14:44 UTC

Can lead a horse to water, but can't force it to drink. Maybe I'm slinging insults so you actually read and do some research. Read a book.
