ChatGPT Alternative That Is Good For The Environment and 100% Free

Posted by u/frankiepisco • 0 points • 3 comments

I have been working tirelessly over the past few months on LeafLock. This app is an entirely offline chatbot. It uses the chip on your phone to respond to prompts instead of harmful and polluting data centers. By design it never connects to the internet, your chats never leave your device, and is fully operational on airplane mode. You can chat with it in voice mode and it can create images as well. All your CO2, Water, and Electricity savings are automatically shown in a dashboard within the app. If you can download this app you can help our mission of reducing our collective reliance on harmful and polluting data centers. Thank you!!

The data centres run the models more efficiently than a smartphone. You're going to charge more often which is done by a power plant which negates the environmental argument.

I can see the case for running the llm locally but presumably it's a wrapper around small distilled open source llm. Why not just call a smaller llm externally if power usage is the concern?

Great idea.

u/Andy016 • 1 points • 2025-11-28 17:29 UTC

Android version?
