

The "AI Water Crisis" is here: Billionaire invests \$5B in Google Data Centers as regions run dry.

Posted by u/BuildwithVignesh • 0 points • 81 comments

Yesterday, we discussed Google moving compute to space via [Project Suncatcher] (<https://www.reddit.com/r/ArtificialIntelligence/s/kXHIVMjWdk>) to escape Earth's energy limits.

Today, the reality hits much closer to home.

****The News:****

The Adani Group (led by Asia's richest man) confirmed a ****\$5 Billion**** partnership with Google to build massive AI data centers. While the headlines are celebrating the "AI Boom," the physical reality is much darker.

****1. The Thirst of 1 Gigawatt:****

The planned cluster is targeted to reach ****1 GW**** capacity.

* ****The Physics:**** A data center of this scale doesn't just need power, it needs water for cooling. ****Millions of liters per day.****

* These facilities are being built in regions that already face chronic water stress and groundwater depletion.

****2. The Global Split:****

We are seeing a terrifying divergence in how regions handle the "AI Wall".

* ****The US:**** Microsoft restarts Three Mile Island (Nuclear) to solve ****Energy****.

* ****Google Global:**** Plans orbital TPUs (Space) to solve ****Heat****.

* ****Emerging Markets:**** Brute forcing construction on land that might not have the ****Water**** to support it.

****3. The "Human Rights" Warning****

This is not just a tech issue. Local groups are already raising alarms that diverting water to cool H100s/TPUs could create a drinking water crisis for locals.

****The Bottom Line:****

Money is moving into infrastructure faster than the environment can adapt.

We are entering a phase where your AI prompt isn't just competing for electricity with your AC but it is competing for water with someone's farm.

****Is this Development or are we liquidating natural resources to train models?****

If this shit bothers you. Stand up now. Protest that orange mother fucker in DC. There won't be another chance to speak your mind. Look where everyone "voting with their wallets" got us. People; it's not or never.

u/Some-Palpitation-314 • 2 points • 2025-12-01 17:42 UTC

This is wild. We're building massive data centers that need millions of liters of water daily in places where people already don't have enough water to drink.

The water issue is 100% bullshit.

Most, as in 90+% of the water is used in the production of power, as estimated using the worst offending power production process. Hydro.

Most new power being built is solar and wind which uses hundreds of times less water for obvious reasons.

The other point is people get worked up by big numbers. Every single AI server in the US uses less water than a single crop in a single US State.

What the fuck are we even doing right now?

u/Busdueanytimenow • 2 points • 2025-11-30 08:54 UTC

When I saw the name adani, it all made sense. Asia's "richest" man has no problem stepping over the bodies of those who can barely afford to get by.

Knowing the adani group, they'll probably use this opportunity to cash in on selling imported water (at a premium) to those affected by this venture.
