

Antis acting like ai is a unique case like they aren't acting identical to this 1800s anti electricity propaganda.

Posted by u/bunker_man • 0 points • 16 comments

Complete with acting dramatic and panicking about stuff that didn't actually happen, because they think it might and laying on the ground like they are dead just in case.

Someone should compile a list of all the historical depictions of advancements in art and technology and how people panicked about them and how the paranoia was never actually borne out. Mind you, it wouldn't convince very many of them, but it would be useful either way.

Sorry if this image was posted here already. I didn't see it.

There is no soul or culture behind AI generated images, it's not art.

u/bunker_man • 1 points • 2025-12-04 23:00 UTC

There's not much soul behind copy pasting the exact same comment over and over again either.

This was randomly send to my discord out of nowhere and my friend didnt send it and for him he claims i send it which i didnt

u/Altruistic-Fill-9685 • 1 points • 2025-12-01 22:17 UTC

Look at pictures of power lines in India and tell me the guy who drew this didn't have a point

I am not saying that they are right. I'm just saying this is a bad example. Have you seen how many wires there were back in the eighteen hundred?

u/bunker_man • 12 points • 2025-12-01 02:08 UTC

And yet the solution wasn't to get rid of electricity, just to not do it badly.

u/Own_Idea_2422 • 3 points • 2025-12-01 08:28 UTC

You are correct about that.

u/WillingnessPuzzled39 • -4 points • 2025-12-01 03:01 UTC

The problem is that right now AI is being done badly

u/bunker_man • 5 points • 2025-12-01 03:22 UTC

That's fine. If people stopped complaining about the existence of AI itself, and shifted more to concerns about how the wealthy could use it, then everyone could work together to unionize and so on and actually solve the problems.

The issue is that the anti generally acts like the impossible goal of making modern tech vanish is somehow achievable, and so mentally assumes the pro must have the opposite extreme view of not taking any possible issue either with it, or with any of the companies that make it. A lot of the indirect arguments they use are just a manifestation of the desire for the tech to go away. Like insisting that their concerns are plagiarism, but then also not supporting the versions made using images owned by the makers.

u/WillingnessPuzzled39 • 1 points • 2025-12-01 03:28 UTC

I agree with you for the most part, my personal gripes with image generative ai, is how hard some people push for it even though, in my opinion it doesn't look good enough yet. Don't get me wrong the people who are super anti image generating ai do have some points, but they are too loud as well

u/bunker_man • 1 points • 2025-12-01 04:38 UTC

Tbf it's getting there in the hands of competent people. The problem is that:

1: for hobbyists, people trying to make something interesting are more cautious what they share, whereas people trying to crank out slop or do scams are not. So the latter can drown out the former.

2: for businesses they don't seem to get that you still need someone with an eye for beauty and enough time to do something interesting with it. So they make ads that look like they had someone from accounting crank it out in 5 minutes.

So there's a tension between how it *can* be used vs what people actually see. Most people using it for good stuff are doing a lot of it by hand to the extent by the end it doesn't even "look ai." So they public perception is

influenced by the most obvious examples.

Exactly

u/ThroawayJimilyJones • 5 points • 2025-12-01 00:34 UTC

for the defense of people in 1800, these electric cable went really out of control for a time. Some street were basically covered by a net of them, and you constantly had accident and fire.

u/Dulcetimor_official • 2 points • 2025-12-01 00:08 UTC

but comparing generative AI to electricity is a fallacy

it is better to use photographs as an example for them

u/2008knight • 1 points • 2025-11-30 23:42 UTC

To be fair, if I recall correctly, this was anti AC propaganda. Not anti electricity in general.

On the other hand, you could say this is a good example of one entity (Edison) trying to fuel paranoia against a rival technology.

u/GimmickCo • 0 points • 2025-11-30 23:25 UTC

I feel like this is less "anti electricity" and more "somebody figure this shit out it ain't working"

u/IronWarhorses • 18 points • 2025-11-30 23:02 UTC

Electricity was BRAND new back then and had a lot pf problems and killed A LOT of people before they figured out how to make it safe. Antis are acting like AI isn't just the latest in a long line of computer programing evolution. They are are acting like my moms granny who was still agsint Electricity and considered it the work of the devil...in the 1960.

Is AI dangerous? yes but then again EVERYTHING IS if used too much or without regulation.
