AI energy demand revised up 36% in new BloombergNEF forecast

Posted by u/streetscraper • 0 points • 11 comments

A new [report](<https://about.bnef.com/insights/clean-energy/ai-and-the-power-grid-where-the-rubber-meets-the-road/>) from Bloomberg New Energy Foundation expects data-center power demand to hit 106 GW by 2035. This represents a "36% jump from the previous outlook, published just seven months ago."

The report also points out the growing size of new centers:

>

As well as the changing geography of new data center construction in the US:

>

Finally, it points out how power generation is not keeping up with new data center demand:

Hey, US, here is an easy solution - blanked ban on all renewable technologies!

u/bluero • 8 points • 2025-12-04 02:14 UTC

Batteries are changing the game. The units are in the equivalent of gallons/hour. As storage (Batteries) get cheaper what matters more is gallons. 1-2 hours of storage would allow 100GW; 4-6hours 250GW via the grid. Off grid build outs certainly help but are cumbersome and slow

u/EdOfTheMountain • -2 points • 2025-12-04 02:53 UTC

Where does energy come from to charge these batteries? Isn't this the problem?

u/DVMirchev • 3 points • 2025-12-04 08:15 UTC

Were does the gas come from to burn in theese gas plants? Isn't this the problem?

u/EdOfTheMountain • 1 points • 2025-12-04 12:08 UTC

Where do the gas turbines come from that currently have a 5 - 7 year lead time?

u/Mother-Prize-3647 • 2 points • 2025-12-04 07:34 UTC

Solar

u/Supermarketlcy4996 • 4 points • 2025-12-04 00:36 UTC

At that pace it will be 20 terawatts in 2035.

u/Mysterious-Low7491 • 3 points • 2025-12-03 23:20 UTC

This is my shocked face - is it correct, no! Is it likely close, yes. Add in transportation electrification, ditching natural gas, and industrial electrification and your electric bill is going through the roof.

u/Unlucky-Reporter-679 • 1 points • 2025-12-04 14:17 UTC

Solar panel installation?

u/Sad-Celebration-7542 • 5 points • 2025-12-04 01:13 UTC

Hm how come? I switched from nat gas to electricity and my heating bills went down. Not terribly surprising. What is surprising is that the electricity rate has also gone down from last year. Adding a lot more kWh to an underutilized grid can save us
