

r/aiwars

In Hank Green's video where he tries to clear up misconceptions and lies about AI water usage, it's interesting to see who he expects to be more angry about his attempt to speak honestly about it.

> You might guess that I'm a little apprehensive about this one. Any amount of "actually this might not be the most important thing to focus on" can be interpreted these days as an unacceptable defense of AI or whatever, but I just felt like it was a good opportunity to talk about lifecycle and resources use analysis and how freaking tricky the are!!

It's a good video, and I recommend watching it.

Ai water use - 16 billion metric tons a year.

USA Manufacturing use - 18 billion tons per day.

If you are actually a water activist, there is more to do on that side in one day than ai all year long.

This is like telling people that the electric for their ai toaster is worse than the electric used by the local company to poison your river.
