

Putting environmental regulations on Artificial Intelligence petition.

Posted by u/BluePinkBlack-Pill • 0 points • 11 comments

It's clear; the use of Artificial Intelligence has gotten into the masses and now people with no jobs or talent use it to produce videos, images, text, etc. But, do these people realize what they're doing Everytime they hit create?

Short answer. No. They don't, those people are either incredibly unaware or incredibly selfish. Artificial intelligence is able to do something humans haven't been able to do...

Using up water. Using up a fuck ton and when I say a fuck ton, I mean enough that you, yourself have to pay for it. If you live in an area with data centers please be aware of your raising water bills.

Large data centers can use up to five million gallons of fresh water a DAY. They use fresh water as a coolant for their equipment- would you want to drink water after it's been used in computers? I didn't think so.

This water is wasted with AI, a valuable resource is being waste. Let's not mention the effects it's having on our wild life. With the AI centers, some being built in the middle of nature; causing trees to be cut and animals having even less room to live. They matter too.

I'm just not willing to sacrifice the world I live in for some stupid programs that can't even make hands properly. I'm not willing to destroy my world, and I hope you aren't either.

With this petition I'm not asking to ban the total use of it; I'm asking to put strict regulations, environmentally, socially, artistically. Thank you.

Putting position in environmental regulations of cows when?

u/Remarkable-Title-387 • 0 points • 2025-12-18 17:30 UTC

I am willing to sign but if we don't build nuclear power plants then the power still has to come from somewhere and renewables are not it.

Either they innovate faster and make it more energy efficient or they use an alternative power source than it isn't harmful to the environment and is actually reliable.

Those are just the only two realistic outcomes and I already know the first isn't possible unless they continue making more money which is also very bad.

u/BluePinkBlack-Pill • 1 points • 2025-12-18 20:29 UTC

Also, I think we should just really go back to earlier models of AI for the public. The ones that relied on electricity rather than water, newer AIs more advanced one requires water to cool and a lot more electricity. Sure we'd be going back but there weren't nearly as damaging.

u/BluePinkBlack-Pill • 1 points • 2025-12-18 19:47 UTC

I completely agree. There's going to be a different way for AI to be powered, but there has to be a better way found. I think AI should be banned altogether but I can't ask that of a free country; so we just have to find a better, less harmful way.

u/Remarkable-Title-387 • 1 points • 2025-12-18 19:55 UTC

Well I hope you will accept that Chernobyl might get a sequel one day if you don't want to lose heating, AC, the internet, or your PC then.

u/BluePinkBlack-Pill • 1 points • 2025-12-18 20:04 UTC

Well we have a lot better technology than they did. Nuclear is the cleanest energy we can get. If it were up to me we wouldn't even be having this problem, I think we should all live outside of societal standards and live purely free. But, we can't do that cause tech rules us. Id rather the risk of Chernobyl then the active threat AI is posing. Can't fear the risk if the active threat is y'know. Active.

u/Remarkable-Title-387 • 1 points • 2025-12-18 20:18 UTC

...

I want to take you seriously but if nuclear does fuck up you're saying that the potential ****extreme and acute**** immediate harm to life itself will is better than the environmental harm from AI that we already know is gradual?

Nuclear might not even be enough to compensate. We could easily have multiple reactors go critical because someone made an honest mistake. We could easily still need to burn the same amount of fossil fuels regardless of whether or not we use it.

Climate change activism is a hard sell because if you don't live in a desert, on the coast, or on an island then you're relatively fine all things considered for at least a good while. More than enough time to fix this in our

lifetime. More than enough to notice when the heat starts to kill our crops instead of letting them grow at all.

I'm pretty sure we're cooked either way but that is my opinion. However, I'm still in support of more nuclear energy production because Chernobyl isn't the most recent nuclear disaster to happen and likely never will be. Just something to consider is all I'm saying.

u/BluePinkBlack-Pill • 1 points • 2025-12-18 20:24 UTC

Brother. I am doing my best here, there is no right answer; all I know is wasting water on AI is one of the worst ways, I am trying to focus on that part, truly I'm not sure what the best way would be; you've got me there. But. Tbh it just sounds like we should get rid of AI altogether, is that your point? I'm not saying I'd want another Chernobyl, of course not you're right we're already fucked but we can't just look at our earth and say "oh well. It's dying anyway" and do things to kill it faster. I'm not a scientist, never claimed to be. Researching better ways to energize AI that's environmentally friendly is a goal of mine, and I'd love to hear from others about what they think because I'm far from qualified. Again, my point is I'm focusing on the active threat, the what ifs are still premature and unresearched. I appreciate your points

There's already a similar petition in progress. <https://c.org/6dgYhNtFqw>

u/BluePinkBlack-Pill • 2 points • 2025-12-18 14:32 UTC

Awesome, I'll sign that one. Thank god there's two.

u/BluePinkBlack-Pill • 1 points • 2025-12-18 14:13 UTC

Not sure if the link is accessable on the post, barely use reddit. Here is the link for those interested, please I urge to sign.
