

AI is proof the silicon valley tech elites never really cared about the environment.

Posted by u/Timely_Car_4591 • 0 points • 8 comments

With the current AI center tech boom, we never seen such a huge explanation of electricity and water use. Tech companies are driving up prices of electricity and water and use so much they're installing generators on premise. Some of them are connecting themselves straight power plants.. In a few years the silicone chips they use will all be thrown into the dump because of obsolescence and not being compatible with consumer tech, creating more environment issues. and no the power requirements of many of these chips means you won't want them even if you could convert them. most of them will be sent over seas to get the gold extract from them, polluting third world environment.

It's pretty commonly accepted at this point that any kind of social/climate justice espoused by tech founders was just a marketing ploy.

u/legend78 • 3 points • 2025-12-22 18:32 UTC

Did anyone ever think that they did?

u/pseudonym7083 • 2 points • 2025-12-22 20:40 UTC

They've been trying to make people think they cared?

u/BetterCrab6287 • 1 points • 2025-12-22 20:05 UTC

Imagine all the waste prevented by removing power bricks, and then giving out cables that require new power bricks anyway. So wow.

At least laptops are finally going USB-C power instead of each brand/model using different bricks.

u/legend78 • 3 points • 2025-12-22 20:07 UTC

They did that so they could sell ppl chargers to the laptops they just bought. The only reason that most laptop brans are switching to USB-C is due to the fact that the EU is forcing them to.

This is true and a popular opinion
