

Has anyone seen this AI data centers using more water than bottling water companies?

Posted by u/altcoinbillionaire • • 0 points • 19 comments

I know this is bullshit cause that's humans we use trillions of gallons of water is globally annually, and less than one percent of that goes to data centers across the globe, maybe 500000,000 to 1,000,000,000 gallons of non-potable water, so I'm trying to figure out where people are coming up with this insane logic that it's somehow ruining the water table, taking away drinking water and producing more water than bottling water companies. I mean, I know it's not true, but has anyone else been running into this? Why is it necessary for people who are against AI to make up bullshit?

Of course it's bullshit. The climate alarmists pretending this is another way we're all going to die within 5 years, but trust me, after hearing that for over 50 years, they're full of shit.

The reality, AI companies have and are devising ways to reuse the water in innovative ways. Any alleged scarcity of a resource that literally covers 70%+ of the earth's surface is most likely a good thing. It will eventually lead to innovations like cheaper desalination processes (which are already being developed) that can then move water to areas where certain populations have been denied it.

So, not an issue worth any worry.

And all the time they miss one important detail. *You do not use* water *to cool a computer!* It damages the circuitry and poses an electrocution and fire risk! Liquid Coolants use a specialized formula that is not condensing so that it would be safe around electronics. I can't even fathom *where* does anyone get this idea beyond the kind of stupidity Dietrich Bonhoeffer would understand.

u/ferriemattthew • 1 points • 2025-12-27 15:25 UTC

They're probably complaining about the corrosion inhibitors they add to the cooling loops. Also AFAIK liquid cooling is never designed such that the electronics are in contact with water.

u/DavidFoxfire • 1 points • 2025-12-27 19:18 UTC

That's what I mean by a special formula being used. Anti corrosion as well as anti condensation. Also to be mentioned that all the liquid coolants in all computer builds

(including all data centers) are insignificant compared to how much water it takes to grow food.

u/Extreme_Glass9879 • 2 points • 2025-12-26 20:17 UTC

I drink more water through Mountain Dew then the average AI center uses..

u/altcoinbillionaire • 1 points • 2025-12-26 20:18 UTC

Is your urine radioactive?? I'm just curious I feel like it would be like neon green

u/Extreme_Glass9879 • 2 points • 2025-12-26 22:00 UTC

You know what I expected humor and humor was received. I have many questions. But excellent imagery it's almost poetic.

u/Fun-Western618 • 7 points • 2025-12-26 15:43 UTC

Nobody gave this much of a shit when crypto fucked the whole gpu market.

So i dont get why people care to push their made up information about Ai even tho they dont know if its true themself.

u/alidan • 1 points • 2025-12-27 19:30 UTC

partially because there is no end in sight for ai, but for crypto there was an effective end.

u/Steamed_Memes24 • 1 points • 2025-12-26 16:41 UTC

It only really matters if youre in an unstable power grid area. Mostly 3rd world countries that are trying to mine what they can as they get a black out every 2 hours lol.

u/altcoinbillionaire • 1 points • 2025-12-26 16:33 UTC

I just think it's weird that we live in the digital age or the age of information and somehow we've got individuals using super computers to ignore and deny information that would take seconds to fact check

u/xoexohexox • 8 points • 2025-12-26 14:23 UTC

Just farming is 2 QUADRILLION gallons per year. One gallon for every single farmed almond. Hundreds of gallons per cheese burger.

u/altcoinbillionaire • 1 points • 2025-12-26 16:32 UTC

Yeah, I was reading that mathematically the agricultural industry goes through enough water every two days for the entire AI industry globally.

u/xoexohexox • 2 points • 2025-12-26 16:35 UTC

I also read somewhere that if you hooked water intake for global AI datacenter compute up to one of the Great lakes it would only drain a fraction of the amount that evaporates off the surface of the lake each day.

u/Jefari_MoL • 2 points • 2025-12-26 20:52 UTC

I heard a similar stat with data centers in the UK where the daily rainfall exceeds the amount used.

u/fleegle2000 • 5 points • 2025-12-26 13:31 UTC

I don't know how they measure up to water bottling, but if you want to compare water usage look into the amount of water needed to put meat on your table. AI is a drop in the bucket compared to that. If you ate one less meal with meat in it you could make up for years of AI use.

u/Ark3tech • 12 points • 2025-12-26 13:07 UTC

AI is just the new thing to highlight energy consumption using misinformation. Two years ago it was Bitcoin instead. Once AI is normalized, it will be something else.

u/Drakahn_Stark • 6 points • 2025-12-26 12:21 UTC

They (probably ignorantly) keep pushing the idea that all technology use counts towards AI, as if other technology does not exist.

Datacentres are not the majority of tech resource use, and AI are the minority of datacentres, clearly AI has not reached the stage of using 'more'.

AI Datacentres are also mostly closed loop, which does not waste water in the way that evaporative cooling datacentres do.

Resource use is a fair thing to be concerned about, spreading the lie that AI uses more resources than anything else is not quite as fair though.
