

If ai has no environmental impacts...

Posted by u/NearInWaiting • • 0 points • 1 comments

If ai has no environmental impacts how come the price of computer parts, especially RAM/GPUs has increased to the point consumer pc prices are increasing? How come billions of dollars have been invested into data centres, hundreds of data centres are being built? How come pro datacentre "anti nimby" political lobbying groups have been created to push for more data centre buildouts/squash anti data centre groups. How come electricity prices are affected in areas with data centres and water shortage issues are centralised to the location of these data centres.

"But the environmental cost of one individual prompt isn't very high", the environmental cost of you using a coffee machine isn't very high either, but you wouldn't say the coffee industry has no environmental costs.

AI datacenters have unchecked growth and increasingly concerning environmental impact...anything with half a billion neurons can figure that out ;)
