OpenAI, SoftBank Invest \$1 Billion in Stargate Partner SB Energy to expand AI data center/power infra

Posted by u/BuildwithVignesh • 0 points • 2 comments

OpenAI and SoftBank Group are each contributing ****\$500 million**** to a joint ****\$1 billion investment**** in SB Energy, a SoftBank-owned data-center and power infrastructure company.

The funding is intended to expand large-scale AI data centers and related power capacity under the ****Stargate initiative****, a multi-year effort to build AI training and inference infrastructure.

As part of the agreement, SB Energy will build and operate a previously announced ****1.2-gigawatt data center site in Milam County, Texas****. SB Energy will also become a customer of OpenAI, integrating OpenAI's APIs and deploying ChatGPT internally.

The investment highlights how companies are now ****directly funding**** energy and data center buildouts to support the increasing compute and power demands of large-scale AI systems rather than relying solely on third-party infrastructure.
