

Anti-AI Project Proposal for school (environment)

Posted by u/mewwwwwwwwwwwwwwwww • 0 points • 4 comments

Hey guys, I have this project for school wherein we have to implement a project that's meant to protect the environment. Everyone's doing tree planting and the like, and our professor absolutely hates repetitive work so I wanted to do something different. My first thought was going against AI.

I thought this would be the best subreddit to ask, but does anyone have any ideas/examples of what project i can implement? It has to be feasible within at most 2 months and I genuinely cant think of anything 😭

Thank you. ❤️

Happy to see one of my mindset. I'd start with basics like the Data Center emissions because of the endless slop being produced to post on social media

Do you have any specific ideas related to Data Center emissions? I was thinking of maybe an outreach activity related to this but I'm stumped
