

I'm Not Going To Stop Using Artificial Intelligence Because You Pretend To Care About The Environment

Posted by u/-Brandonline- • 0 points • 103 comments

I am tired of these virtue signaling hypocritical guilt tripping posts, artificial intelligence impacts the environment this and water consumption that, everything human beings do will always have an environmental impact and that includes making these repetitive posts and comments, besides if you have a problem with someone who uses artificial intelligence on a regular basis, perhaps think for a minute about the source of artificial intelligence, because it came right from human beings and you're one of them.

I'm not going to feel guilt for doing something that has been happening for hundreds if not thousands of years, like if you actually did give a damn about the environment you wouldn't have a phone, computer, car or air conditioning since a lot of that has an environmental impact regardless of where it comes from, in fact if you hold these values at all then why aren't you living with the Amish People who do not have these qualities of life, sounds like a double standard.

I'll in all likelihood receive a lot of downvotes from these anti artificial intelligence users who will end up spamming my inbox with comments about me being ignorant or selfish for something that has been occurring for a while, but if anything it will prove my point that you caring about the environment is just a lie you're telling yourself so you're able to sleep at night, give up everything that brings comfort to your livelihood and then discuss your concerns about environmental impact.

I think the issue isn't that people shouldn't use AI it's more about being aware of its impact while improving the technology. Every major technology (cars, data centers, smartphones) has had environmental costs, but society usually focuses on making them more efficient rather than abandoning them entirely.

u/Current-Coffee-2788 • 1 points • 2026-03-24 09:01 UTC

I understand your point, use AI without guilt.I understand your point, use AI without guilt.

u/Odball • 1 points • 2026-03-05 07:29 UTC

The whole of industrial-consumer society is unsustainable. While it is laudable to do one's part for the environment, individual consumers are not to blame for systemic issues that prioritise infinite growth on a finite planet.

We can still, however, acknowledge that the systemic problems are real. AI is problematic. Our farming practices are problematic. I still eat beef and use AI.

u/Interesting-Food4834 • 1 points • 2026-02-28 19:08 UTC

AI is actually the only thing that can save us from destroying our planet

u/Immediate-Matter868 • 2 points • 2026-02-18 21:11 UTC

What annoys me is how performative it is. No one cared about water shortage before. I remember when it was 2022/2023 and everyone had to send their water usage to the local authorities if it went over a certain number because the heatwave had dried up the vast majority of fresh water we drink. No one cared then. No one cared about the polar bears until AI. No one cared about global warming and mocked everyone for trying to change until AI became a thing. People just want an excuse to hate AI, and the environment seems the best bet. It doesn't even have relevance to the polar bears 🐻 yes it uses up ridiculous amounts of water, but at the end of the day, if we were really in a water shortage, the government will be placing the same rule back in place that it did in 2022/2023 (can't remember which year). Honestly, yes it damages ecosystems, and yes it's bad, but blaming all global warming on AI when global warming has been a thing since what, 1950? It's ridiculous, focus on clothes production, car use etc. That's what's killing the polar bears. Not everything is the result of AI.

u/slayy0 • 2 points • 2026-02-20 23:31 UTC

I remember seeing some video that blamed GenAI for the warming of the planet and I'm like "??? where was that in 2023-2022..."

and besides, I don't think AI data centers contribute THAT much to climate change just yet

u/Immediate-Matter868 • 2 points • 2026-02-21 00:27 UTC

I agree with you completely. It's ridiculous. Like actually ridiculous. Like yes, just like every other data centre, it's awful for our planet. But it's not the main issue. AI isn't the bane of all global warming. It's so annoying 🤔

u/Immediate-Matter868 • 1 points • 2026-02-21 00:25 UTC

What about when it was warming in 2014 🤔

u/slayy0 • 2 points • 2026-02-21 09:33 UTC

Exactly, like...

Great thought

u/theconandog • 0 points • 2026-01-22 23:32 UTC

That's an ignorant thought and only relevant in your AI bubble.

Whenever you say "because you pretend to care about the environment" is you're ****oversimplifying**** a

whole concept of environment/ambiental protest. You simply don't know everyone to tell every single person who don't like AI is hypocritical.

Using myself as an example I am an environmentalist, and I fight against AI, so much the first sentence of the **manifest article I'm writing** is:

>***"The fight against Artificial Intelligence is not merely about abandoning generative AI applications or image generation tools such as ChatGPT, but about rejecting the entire deeply rooted ecosystem of corporations that finance, acquire, invest, and destroy our biodiversity in the name of capital, including Meta, Google, OpenAI and others."***

Every single company that uses AI is a threat to the natural world

>***"The Industrial Revolution and it's consequences have been a disaster for the human race"***

I'm not telling you to do so but I abandoned Instagram, WhatsApp, Google and also sold my phone only to buy an older one, people who have the same mentality is on the same level of alienation of those who don't give the little attention as possible for anything bad that's happening in the wild, and that's just sad.

u/-Brandonline- • 2 points • 2026-01-22 23:36 UTC

I didn't even claim that every single individual who doesn't like artificial intelligence is a hypocrite, if you actually read the post you would see this is calling out those who shame and scrutinize others for using artificial intelligence, preaching about how it impacts the environment while literally contributing to environmental degradation.

Honestly, I'm just annoyed that AI is being incorporated into so many things. Roleplaying? I have no issue, but for actual art, important stuff like essays, where false information could be given while portrayed as truth, and the illegal mess where people tell AI to recreate real people in a different way? That's when I start getting irked about AI. I think I only have about 3 AI-related things that I purposefully added myself on my own choice, Grammerly, Chai (Though I'm slowly considering deleting that app now), and C.AI though it's just the website and not the app (but i'm not using it that much anymore since I previously deleted my account rejoined only to be hit with age verification stuff). Everything else are just unwanted additions to other apps like TikTok or Youtube that I don't even know how to turn off. That, and I feel like so many people on TikTok are quick to blame AI for the polar bear issue when global warming is clearly there and still the problem. Yes, AI is also an issue, but it's not the *main* issue for the state of the world. And I mean the world specifically, not society, where I'd say yeah, it's a big problem.

u/-Brandonline- • 1 points • 2026-01-16 21:17 UTC

Streaming services, social media, air conditioning, food processing plants, aircrafts, motor vehicles and almost everything else has an impact on the environment along with artificial intelligence, blind acceptance is not what is happening here, it's called understanding how human beings have lived for hundreds if not thousands of years and accepting the fact we won't change just because somebody just now realizes the impact we have on the environment, progress comes at a cost and the environment has always been the payment.
