

Why I'm anti-AI, many reasons: Environmental impact, preventing the singularity, AI "writing" and AI slop, and the AI hallucinations.

Posted by u/I-Am-Learning-Thai • 0 points • 7 comments

I was once an AI user but quit and became anti-AI after I noticed DeepL is being inaccurate for translating Russian to English (English is my native language, but I'm learning Russian. I often use the dictionary, and morphology/grammar guides to make accurate Russian translations, manually without AI. That is often more accurate than the Russian–English DeepL or Google Translate translations.) Also their English to Russian translations are inaccurate, that a human translation is way better. Also many times, AI models have hallucinated and claimed "fanon wiki" content as fact, and blocked content due to its filters (meaning you can't say anything it doesn't like). AI also harms the environment and there is many news that states the environmental impact of GPT is worse. and using Ecosia will help as it plants trees. That's why I stick to "Winx" (2004) because I really like the art style, plot 2D drawings, AI wasn't used, and Stella's hair is very often down in her civilian form (in every season 1 to 3 episode her civilian hairstyle was always down). The 2025 Winx uses AI art and AI-assisted hairstyles, Stella's hairstyle in camping in Reboot's season 1 episode 6 is awful. The Stellas bangs are awful in the 2025 Winx; they are not full. In 2004 Winx Stella was perfect. Stella's blonde hair was worn down with a lilac headband and her bangs are full. Her hair is so long and hair strands frame her face. The blonde was a golden yellow shade with shine in it. That version of Stella was the prettiest, and the original "Cinélume" seasons 1-4 was the best entirely due to art style, plot, voice, and other things. I'm 17 now, but I remember when I was 13, the internet was much cleaner and free of AI writing, slop and "art". Google Translate and DeepL existed but no one should use it anyway as an AI is not accurate. If you want to translate something get a dictionary, grammar and morphological dictionary for Russian (if you want to learn Russian.) the main reason I hate AI art as it takes photos without artists' permission. that's why I often draw on my own with Ibis Paint X and write on my own. Human-made art and writing, and human translators are always valuable, companies should always hire real people to translate, write and draw. So f★ck AI. I am not sure whether to change my profile picture to a Clippy, but I will keep my 2004 Stella to promote the best era of Winx Club and re-route people to the 2004 show. AI harms the environment as I know. The singularity is when AI robots take over the world and be the main Internet posters. I want to prevent that, so it can be like pre-September 2022. (A disclosure that I am AuDHD, so this is how I type and phrase things.) AI sucks, I know.

The enviromental impact is over-rated, a burguer needs much more water and power than the use of AI for a normal user.

The rest of the problems will be fixed with time.

u/I-Am-Learning-Thai • 1 points • 2026-01-19 19:36 UTC

Hey I'm coming back to comment. Can you explain this again about the environmental impact being over-rated, but the problems will be fixed over time? I don't like seeing AI in the creative field though, but does that mean AI's problems will be fixed? Is there anything you have to say with the post of mine?

u/I-Am-Learning-Thai • 1 points • 2026-01-17 13:03 UTC

oh i understand, can you explain?

u/Nilpotent_milker • 1 points • 2026-01-17 02:22 UTC

Breaking this up into paragraphs would be helpful

u/I-Am-Learning-Thai • 1 points • 2026-01-17 02:37 UTC

i did it, thanks.

u/I-Am-Learning-Thai • 3 points • 2026-01-17 01:10 UTC

Yes, I'm anti-ChatGPT and anti-AI art and anti-AI music/ anti-AI text and video, but I'm not sure about Google Translate and deepl (deepl uses the Ecodatacenter.) What are your thoughts on how I am anti-AI in some things.

u/snek_kogae • 1 points • 2026-01-17 05:33 UTC

I see nuance as a sign of integrity and critical thinking skills.

AI is extremely broad, like tech / maths itself. So I don't think you'll see any serious person saying *everything* is bad/good. (If they were serious, you wouldn't be seeing them on reddit for many of the same underlying reasons).

You'll always get people who try to out-hardcore each other, but *generally* i think anti-AI is about being against AI content, like you are. We don't want to read, watch, listen to, etc something that a human didn't make. We also don't like it when products are shoved down our throat or we're made to indirectly pay for it against our will.

There's many things that have similar issues (eg google search, social media, etc fuel a lot of plagiarism and data center use too) that haven't been similarly criticised like gen AI, likewise a lot of AI issues pre-dating the rise of generative AI (eg in weapons) that didn't result in the kind of reaction we see know. Even while animal products are many times worse environmentally, they don't have those "in your face" attributed to induce such a strong reaction.

So yeah, i think for the most part it's AI generated content that is the main trigger due to how prolific, annoying, unnecessary it is. And on that, you'll probably get almost universal agreement.

Where disagreement tends to happen here is on everything else.

u/I-Am-Learning-Thai • 1 points • 2026-01-17 10:41 UTC

yeah I agree DeepL itself is useful because if you look up EcoDataCenter it's what it uses for its translations.

<https://www.deepl.com/en/blog/sustainable-energy-ecodatacenter>

but critically thinking is what I do. I would want to read, watch, listen to something a human made, I am being against AI content, videos, art, and music, so I am anti-AI.
