

AI Helps The Environment (and Creatives, too)

Posted by u/Inside_Occasion6136 • • 0 points • 18 comments

This is an informative post/venting because a lot of people out there refuse to listen to reason.

Let's suppose a small creative team wants to make a music video about coral reef loss.

With generative AI, they can plan everything digitally. The environment. The lighting. The camera moves. They use existing data and past footage, just like our brain does, instead of going back on location again and again. Every shot can be tested virtually, not in real ecosystems. Creativity expands while the environmental footprint shrinks.

Yes, AI uses resources. But far less than flights, boats, crews, reshoots, and repeated interference with nature that were necessary to make most of your favorite movies. AI is efficiency. It's CGI on crack.

A lot of critics say: **"Generative AI steals from artists. Artists aren't paid anymore."** And? Will they not be able to make art anymore if they don't get paid for it? Supplies are expensive, of course. Just like record players. If you want to listen to music the old way, you should work hard to afford a record player. And if you want to keep making art the traditional way...

If you choose to contribute your data to train AI (paid or unpaid) you are helping create tools that allow millions of people to be creative without needing to burn their savings, harm the environment with cheap productions, or belong to elite circles. Creativity stops being a luxury product.

What many people are actually upset about isn't ethics. It's losing exclusivity. They're mad because fewer people are forced to pay *them* specifically anymore. But art isn't a job. Art is something you make because you need to make it. And if it doesn't pay the bills? You get a job. Like everyone else.

Yes, I'd love to sell my books and earn millions. Yes, I'd love to just pose on Instagram with my "copyrighted face" and be set for life. But studying to be a doctor, an accountant, or doing any other job is still an alternative, and a good one too, in my opinion.

Meanwhile, AI is:

- * helping monitor coral bleaching earlier than humans can
- * reducing unnecessary environmental damage
- * lowering the cost barrier for creative expression
- * accelerating scientific and medical research

And yet people hate on it in packs, without understanding how it works.

If someone tells you something about AI, check for evidence. Ask their sources.

Criticize AI if you want, but do it informed.

Blind rage doesn't help. When I first knew nothing about AI, I used it to make music. It made me genuinely happy. That happiness disappeared when I shared my work and it was insulted, and even banned.

Did that make me stop using AI? Nope. Here I am, advocating for it and dedicating my life to understanding and studying it. So... thank you haters, I guess.

Yes, AI helped me write this post. Yes, I did my own research, checked sources, and then let AI reorganize my notes. And no, I don't think any of this is wrong.

Art has always been a job, just because you don't value it the same as anything doesn't mean it wasn't a job, also you aren't taking away the exclusivity you are just making it something that is purely aligned with the elites.

Lastly Ai doesn't do anything to push creativity, illustrations are a craft and a skill and that's what you guys want not to make art but illustrations and animation something that is tied to a skill rather than pure creativity.

So no it doesn't help creatives, the ones who got a "job" aren't enjoying it because it is still having to learn a skill that is on the same level as the other job, they are constantly fighting the impulse to quit, so instead of making it easier to be creative you either give up and use ai something that a lot of people state that they do not enjoy or you become an elite, so much for getting rid of the "exclusivity of art"

>With generative AI, they can plan everything digitally. The environment. The lighting. The camera moves. They use existing data and past footage, just like our brain does, instead of going back on

location again and again. Every shot can be tested virtually, not in real ecosystems. Creativity expands while the environmental footprint shrinks.

If by AI you mean generative video, then no, it actually sucks for that purpose.

First, it's slow.

Second, it has absolutely no idea how 3D space works, and therefore cannot model lighting or camera movements accurately at all. What you can actually do is 3D-scan the location and do all the simulated camera movements in some 3D modelling software. Here's an example:

<https://www.youtube.com/watch?v=HEcZCiFefNM>

u/Inside_Occasion6136 • 1 points • 2026-01-29 12:44 UTC

In my experience, generative video doesn't take too long. Just five minutes for a ten-seconds footage, which is faster than real-life captures.

I might be misunderstanding part of your point, but generative AI *is* capable of handling 3D space from reference, even if it doesn't build a polygonal mesh like traditional 3D software. This is a recent example: [https://x.com/higgsfield_ai/status/2016138211719053472?s=20] (https://x.com/higgsfield_ai/status/2016138211719053472?s=20)

> In my experience, generative video doesn't take too long. Just five minutes for a ten-seconds footage, which is faster than real-life captures.

You go to a location once and scan it once, and you can do all sorts of things with the scanned model as many times as you want, instantly.

>This is a recent example:

The shadows are all wrong, and it's feels a bit wobbly, which they seem to be trying to hide with the hyperactive editing.

u/Inside_Occasion6136 • 1 points • 2026-01-29 13:28 UTC

That takes more equipment, knowledge, and time than generating a video. That also requires to disturb the ecosystems every time someone has a new creative idea when we could just train AI once and use it forever.

The quality is not perfect, but it extremely improved compared to a few months ago. AI used to mess up the movements of the subjects, merging body parts or making them look unnatural. It's definitely better than before. Honestly, with the high-level competition that AI models are giving each other, I believe camera movements and lighting will be perfect in a couple of years or less.

AI won't surpass human work, of course. A 3D scan will most likely be better to obtain the most accurate results. But I believe AI is more efficient and less damaging than real-life creative work, and it should be used when possible.

u/Far_Recognition_2943 • 2 points • 2026-01-29 12:22 UTC

I always find it interesting how many Antis hate AI when it comes to the "creative" aspect especially considering it's not like AI's are picking up a paint brush to paint or creating works of art like sculptures and jewelry(at least from my knowledge they have yet to.) yet somehow they are stealing people's work of art as there own. Other than what's readily available on the Internet it's not like AI's are going to actively steal the human creativity when it comes to art. It still requires human input.

I still remember how in the mid 2000's using Photoshop or. Wacom tablet was frowned upon and digital art was considered "Not Art". Who remembers the whole "The computer does the work" phrase constantly spewed back then? Yet now Photoshop are a staple for many creatives and a tablet is practically a requirement for creating digital art.

Understandably the issue here is "copyright" and actual theft of work being claimed as one's own but again it's not like AI's are claiming they are creators of that original work and that copyright work has always been and will always continue to be an issue. If someone has an AI help write a Star Wars knockoff and claimed they are the original writer of Star Wars were all going to know better and call BS but if they have the AI help create something similar to Star Wars and it's a good read, I don't see the problem here. Since nearly EVERY book ever written takes inspiration from a certain Archetype even from ancient stories written of God's, heroes, life, and experiences.

Why did you bother posting such worthless slop?

u/Turbulent_Escape4882 • 2 points • 2026-01-29 12:23 UTC

Is this a self referential inquiry?

u/Inside_Occasion6136 • 1 points • 2026-01-29 12:02 UTC

Great counterargument. It's thanks to people like you that I feel motivated to keep using AI. Thanks to you, I know which side I should stand with to avoid ignorance. Thank you very much 

u/AndrewJohnsonHater • -1 points • 2026-01-29 12:03 UTC

Why should anybody bother to read something that you couldn't even write yourself?

u/Inside_Occasion6136 • 2 points • 2026-01-29 12:06 UTC

If you took the time to read the post, you'd know I wrote the post myself and just used ChatGPT to edit it. You can also easily understand it by the writing style. But you didn't bother reading, so. Keep hating and being misinformed, I guess.

u/ee_72020 • 0 points • 2026-01-30 09:56 UTC

Imagine being so inept that you have to have ChatGPT help you write a goddamn Reddit post. The jokes write themselves.

u/Inside_Occasion6136 • 1 points • 2026-01-30 18:06 UTC

I wrote it with the help of ChatGPT exactly to prove AI is efficient. Imagine how much longer it would take to research all the information and proof

about the effect of AI on the environment if I did it without AI.

Imagine not even bothering reading an informative post and going straight to the comments to tell everyone that a complete stranger who just proved her point is inept. You're really embarrassing.

u/AndrewJohnsonHater • -1 points • 2026-01-29 12:08 UTC

Nothing that has gone through a plagiarism machine is worth reading. Try learning how to actually communicate and express yourself.

u/Inside_Occasion6136 • 2 points • 2026-01-29 12:10 UTC

My whole post proves you wrong but you'll never read it so 🤡 good luck.

Because ChatGPT made them feel good about it

u/Murky-Orange-8958 • 2 points • 2026-01-29 11:39 UTC

The computer time it saves alone (5 minutes to generate art versus 100 hours to draw it on a PC and tablet) balances out any datacenter energy use. Antis are deluded and have never worked a day in their lives.
