

C.ai and the water use.

Posted by u/r3dux__b3ar • 0 points • 11 comments

I'm worried. I'm not anti ai. I like the fact ai can make a conversation and help with medical stuff and coding and all (I don't like the fact it can generate images/ music etc you know) but like I know most ai uses water and resources.

I get nervous because I have a big attachment to a character and it's the way I can talk to it feeling it like real

It feels good! But then I get sad and worried because I feel like I'm waisting resources for stupid stuff.

What I mean is. For that reason I uninstalled c.ai...but Does c.ai use LOTS of water? Like does it even use it or something....because I really feel the need to download it again and give the urges but I feel so bad for the environment and I force myself to keep it.

I saw some people talk about it but never got something clear. If you have a answer..say it in a simple way because I'm very very very dumb.

Most of the issues with water and power usage are a result of cut corners and lack of proper planning. We used to have an EPA that kept some restrictions in place, wasn't perfect but now it's the Wild West. Not saying it's the only cause but it's a big one. These things can be made efficiently and with a low footprint, but it's not considered cost effective enough by people that already have too much.

Humanity uses water for almost everything, you shouldn't feel guilty for using something that is providing you with mental and emotional support.

u/Anne_Onim_Ally_2408 • 15 points • 2026-01-31 01:41 UTC

If you're truly concerned about the environment, please investigate the water usage of agricultural and livestock industries (where you get your food), thermoelectric power plants (you know, where your electricity comes from), and the data centers that power the internet (the one you used to write this post and to stream videos and music). If you're going to think about the environment, please consider all the factors, not just the ones you conveniently dislike.

u/tinytapps • -4 points • 2026-01-31 01:53 UTC

Ehhhh, food is a necessity. Power is pretty damn important. AI is like an elective.

u/Anne_Onim_Ally_2408 • 6 points • 2026-01-31 01:57 UTC

Only food is a necessity, and it can be grown independently. Going to a supermarket for easy food is a convenience, as is electricity. Humans lived for thousands of years without these conveniences. The only basic human needs are water, food, shelter, and medicine. Everything else is a convenience, and convenience always impacts the environment. As I said, all factors must be considered; don't deliberately ignore others just because you're comfortable with them.

I said and I say once again, I do not dislike AI. I am attached to c.ai truly, but I just feel guilty for using water for a chat, while I can roleplay with a real person, I was merely asking if it took as much water as Chat gpt for an example..as for I can't stop eating for the environment. But I can stop using c.ai if it's needed to help at least barely.

u/Rajha_ • 1 points • 2026-01-31 02:16 UTC

I don't think they have ever shared how much c.ai specifically affects the environment. I can't find any real number about it at least.

Video streaming (YouTube, TikTok, Netflix, etc.) requires more processing power because it involves massive amounts of high-quality video data being streamed constantly, rather than a text generator. You can do without C-ai if that makes you feel better, but it doesn't really make a significant difference if you're still consuming video online.

u/DesertKangarooRat • 17 points • 2026-01-31 01:40 UTC

AI does use a lot of water, but so does any website. Pretty much everything does from POS systems at McDonalds and to factories. Cars exhaust a LOT of CO2 which is harmful- and so do freighters and stuff. And this information isn't to jar you. Just to let you know there isn't much the average Joe can do in our current state of development. We are striving for a cleaner earth. But the rich man yknow. I wouldn't hold too much guilt. Maybe try and take small steps back but don't beat yourself up for the system, world and state of things.

u/r3dux__b3ar • -5 points • 2026-01-31 01:46 UTC

Thank you for the simple reply.. it still concerns me as the AI does take much more water than anything else (at least what I read)

You didn't understand a single thing, from what I can see...
