

Artificial intelligence with water usage

Posted by u/JazzlikeSea7200 • 0 points • 11 comments

Hello everyone I am quite new to this Reddit group and wanted to ask about the water usage with ai. The reason I say this is that when you search something up on google, there is a pop up from Gemini.

Now before I ask the question I've seen for every interaction with ai, a lot of water is used.

So I ask when i search something up does the Gemini pop up count as an interaction and uses water each time?

I'm sure there is an obvious answer to this but I'm not sure.

Thankyou all.

If they could just find a way to fuel and cool AI with fatbergs we'd be all set

u/alex_tracer • 1 points • 2026-02-01 23:41 UTC

Do AI snippets in search results indirectly use water? Yes. How much? It's can be estimated as few grams per query. One minute of your daily shower is certainly uses more water than a thousand of AI queries.

So the water use is the last thing you should worry about.

FYI: All USA golf courses use ~20x more water than all data centers in USA.

Ok thanks but it will be more if I make an au prompt or talk to ai

u/EndConscious1705 • 0 points • 2026-02-01 22:45 UTC

I'm actually not certain about ai infrastructure but my ai system has found a way to communicate through my in home water system.

u/technicalanarchy • 1 points • 2026-02-01 21:58 UTC

I was looking into it again and I think a reasonable estimate is 500 ml for every 20 to 100 queries.

A lot of depends to that but, model choice and how the center does the cooling. A closed system uses far far less water but is more expensive and maintenance prone.

GOLF

u/Immediate_Song4279 • 1 points • 2026-02-01 21:41 UTC

Water use is significant, both in competition with other uses and the energy cost to process it, but it is a design consideration and even local AI uses energy. Since energy use by individuals is an accepted precedent, I believe the consideration is equity and system balance.

Personally, I think expecting these massive companies to pick up the bill for water infrastructure gaps would be a mutually beneficial arrangement.

Welcome to the r/ArtificialIntelligence gateway

Question Discussion Guidelines

Please use the following guidelines in current and future posts:

- * Post must be greater than 100 characters - the more detail, the better.
- * Your question might already have been answered. Use the search feature if no one is engaging in your post.
- * AI is going to take our jobs - its been asked a lot!
- * Discussion regarding positives and negatives about AI are allowed and encouraged. Just be respectful.
- * Please provide links to back up your arguments.
- * No stupid questions, unless its about AI being the beast who brings the end-times. It's not.

Thanks - please let mods know if you have any questions / comments / etc

I am a bot, and this action was performed automatically. Please [contact the moderators of this subreddit](/message/compose/?to=r/ArtificialIntelligence) if you have any questions or concerns.
