

Why exactly is AI bad for the environment, and why is it worse for the environment by using certain features?

Posted by u/Worldly_Accident727 • • 0 points • 6 comments

I was asking if I could use AI to generate sewing patterns, and I was met with a lot of backlash due to people saying that using AI to generate images is really bad for the environment.

Why is this? And why is specifically worse to ask it for patterns compared to asking it a regular question?

....because AI is generally hated and frowned upon and so people will discourage it.

Of COURSE go ahead and use AI for your sewing patterns that is so innocent lol. If you knew how much computing power is put into absolutely vile content or straight up abuse, you wouldn't think about something like that for a second. Yes, data centers use power and yes, energy is not free. So, AI has the same downsides as basically every single industry.

"no u are not allowed to drive car, it's bad for the horse carriage makers" don't you think people said exactly that??? My god.

Just use AI. You are fine. The impact is miniscule and is would be downright absurd to attribute anything significant to what you are doing.

It uses a LOT of computing power.

Unrelated, but why would you want to generate sewing patterns via AI? More often than not they don't make sense.

u/Worldly_Accident727 • 1 points • 2026-02-09 15:47 UTC

because the specific pattern I want to sew is sold out everywhere :/

u/savageexplosive • 1 points • 2026-02-09 15:53 UTC

That's fair, but an AI won't reproduce it for you. Just go on YouTube and watch some videos from sewists who tried out AI patterns. They are a mess. People design patterns taking into account fabric properties, the direction in which it stretches, the steps you need to take to make it look good. An AI will just spew out something that looks like a pattern, but you will just waste your time and fabric trying to make it work.

Might I suggest finding a similar pattern, making a mockup from a cheap fabric and altering your pattern to fit the purpose and your body better? It's not easy, but it's guaranteed to yield better results.
