Hyperscale AI Data Centers: MITs 2026 Breakthrough Technology: The staggering energy cost of powering the AI revolution

Posted by u/SimonBuildsStuff • 0 points • 1 comments

<https://www.technologyreview.com/2026/01/12/1129982/hyperscale-ai-data-centers-energy-usage-2026-breakthrough-technology/>

The energy cost of AI is becoming a critical constraint. As models scale, power consumption is growing faster than efficiency gains. This article explores whether AI growth is sustainable - and what tradeoffs we may face between AI capability and environmental impact.

Data centers have become politically toxic across the board. Anything based on unrestrained building of them is wrong.

u/okram2k • 1 points • 2026-02-20 02:27 UTC

Any new data centers should have to provide their own power

Revolution or greed of few tech companies who refuse to admit that they are investing in a bubble? And ofc they would love to pay energy infrastructure costs out of someone else pocket.
