Welcome to have a stroke , anyway how fast we could terraform mars if we have that much energy capacity and how fast would earth get exuashted by mining uranium so much for this thing if this slop was true

Comments

The AI is talking to thousands of people simultaneously, 24/7, about completely unrelated topics, while your brain would struggle to hold two unrelated conversations at the same time. And even if you just compare individual conversations, the AI's capabilities exceed those of an individual brain in a lot of areas, like coding speed and general knowledge breadth and depth. The AI is not super-human in all aspects, but concluding that a human brain is superior to an AI in every aspect is equally absurd.

It also makes sense -- AI companies, even if you assume that they're prone to risky bets on uncertain future prospects, wouldn't be spending hundreds of billions of dollars on something that's literally worse than a human brain not just in terms of energy consumption but in every conceivable area. If that were the case they could just hire a brain (and attached human being) for some \$100K per year to do the AI's job.

u/SIRenderStudio • 1 points • 2026-02-21 18:59 UTC

read the post , they said same job , that mean only 1 job , i was pointing that out . AI does not talk simultaneously to 100k of people , it just 100k of instances of AI which by definition is different.

and also for fact i am not try to prove a point where ai is ridiculous , i am just try to point out this obvious lie made by bot slop where single prompt eat up power of 3 nuclear reactors . lol you guys addressing the wrong elephant in the room.

(also you can't really compare these 2 things if you also shove in the part there is millions of ai instances , that is like hydrogen bomb vs a teenager kind of scenario)

u/Jakey1999 • 1 points • 2026-02-21 11:23 UTC

I think my brain is only running on 1 watt😂

u/Public-Eagle6992 • 1 points • 2026-02-21 11:08 UTC

This is just bullshit. That's the energy 1 human brain uses compared to an entire data Center running a lot of instances of some AI

u/NecessaryBug6662 • 7 points • 2026-02-21 10:47 UTC

Flash news without the energy from the rest of the body a brain would die.

u/ZeroKun265 • 1 points • 2026-02-21 19:11 UTC

Still not a lot, a human body gives off about 100W of heat, I doubt that the total energy consumption is much higher

But yeah, brain Number is too low and AI number is too high, this is bs

u/This_Growth2898 • 5 points • 2026-02-21 10:44 UTC

Making up random numbers is not any kind of "math".

u/SIRenderStudio • 1 points • 2026-02-21 11:03 UTC

Yeah , I know this is like bunch of zeros off , but i mean how much of them off in real world points , I mean it is ridiculous off but it just number and can't really comprehend the difference without real world comparisons

u/Bavariasnaps • 0 points • 2026-02-21 11:09 UTC

Why do you make it so complicated? Humans consume around 2000 Calories a day or 100 Watts of power. Comes down to around 5 Watt per hour.
