

[Request]: Does a human take more energy than an SOTA LLM?

Posted by u/Curious_Cantaloupe65 • • 0 points • 1022 comments

Let's take example of GPT 5.3 and a 20 year old human.

It takes the same amount of energy to run your body as it takes to run a 100 watt light bulb. That's it. Everything you do. Those 2000 calories you eat to run your body is the same amount it takes to light a room for 24 hours.

The obvious comment is that most of that energy went into providing someone with 20 years of life. A life is an end in and of itself.

It felt like an emotional statement to me, like he's trying to justify all the stuff he's burning to make it work.

It could also be rephrased to something like "look how we can spawn an expert in a few minutes as opposed to needing to train a meatbag... Years! I tell you"
