

Can't find proof that ai uses less water

Posted by u/Bluetails_Buizel • 0 points • 17 comments

I'm pretty sure I saw a graphic in this subreddit that proves that water usage on ai is actually very little as compared to water usage on...?

Comments

Almost all water is used by agriculture. The other big item is power station cooling, but that often put the water back, just hotter, unless it uses an evaporation tower (the water will rain down later).

If you look at the hoses that go into my GPU (zero) vs the river that go to fields, you can intuitively tell that agriculture uses most of the water.

The way that i just saved this comment for backup for the ai water use claims. 😎

I know it's not exactly helpful, but I can't help it be reminded years ago of a comment somebody made about areas of the U.S. that were trying to conserve water at the time. We live in an area that gets a lot of rain due to proximity to hurricane prone areas. Their comment was "Why are we trying to conserve something that literally falls from the sky?" Again, I know it's more complicated than that. However, I do think there is a certain hysteria in the whole thing. Unless you live in a bubble, everything is always a crisis, and it's always the end of the world.

Someone pls help, I tried googling for proof. And somehow google keeps saying that ai uses a lot of water? I must be delusional!!?

u/TripleBenthusiast • 5 points • 2026-02-23 23:02 UTC

Water per prompt is kind of a nonsense claim cause it depends on what cooling the AI uses and a lot of new ones are investing in water-free cooling.

u/Bluetails_Buizel • 5 points • 2026-02-23 23:28 UTC

Sorry, I think I'm the one that made that up

u/TripleBenthusiast • 5 points • 2026-02-23 23:33 UTC

That's ok, never feel bad about making mistakes. Especially since you're open about it and trying to learn from it.

This was after some work on it but its still a hot mess and i used too much room for sources.

This was my original collection of information. It IS ALOT OF WATER, but not alot compared to other things. We could cut food waste by 1% and save 100 times the water. I'm working on the infographic and making things clearer for laymen. This one is kind of terrible as it doesnt explain the difference between waters and why the numbers were chosen.

Most information here is estimations since most datacenters are more than just AI specific. I used the worst kase scenario for most and the numbers are for the largest users of water.

Omg! I remember this post!! You are a life saver!!

u/TripleBenthusiast • 3 points • 2026-02-23 23:28 UTC

Anytime. I'm going to work on streamlining the information and not have any different measurements. This has cubic liters compared to gallons

u/KrulletjeVanTan • -11 points • 2026-02-23 22:00 UTC

AI uses shitloads of water

u/Bluetails_Buizel • 4 points • 2026-02-23 22:04 UTC

That wasn't true!! You anti!!
