Figures for water use of beef and AI, compared by country of origin and model type, with updated modern sources

Posted by u/ram_altman • 0 points • 47 comments

I will be doing greenhouse gas emissions and power usage next. I will figure out a way to edit it so I can fit all the sources plus the chart in one screenshot, but I'm getting tired for the night.

GPT-5 is probably also massively more efficient, because it's aggressively mixture-of-experts and very likely 4-bit inference. I've heard estimates of 4x-8x relative to 4o, putting it in line with Gemini.

Claude Opus 4.6 is even more secretive, but probably similar, though Anthropic remains the most expensive per token by far.

Kind of ironic that Gemini's own AI summary totally contradicts the OP's post about how efficient Gemini is :D

But should we trust AIs to correctly produce stats about themselves? Who knows.

I've provided exhaustively sourced citations for all my data.

u/nuker0S • 7 points • 2026-02-26 10:57 UTC

Antis spread so much disinformation even AI gets fucked up

u/InquisitorPinky • 1 points • 2026-02-26 10:29 UTC

The scaling is almost Apple level of useless.

Further, does this show AI involved data? Is the water per prompt including training and energy? Or is it just the amount for the exact single prompt, which again needs to be clarified: is that a single full question of a user or is it the already split up prompt(if tokens how many) on the server. Are these the

same prompts over all the models?

I absolutely agree that the current panic about AI water usage is ridiculous and overblown, but I don't think showing data like that will help in that.

Read the studies.
