

Stop australia from using ai for a sustainable future.

Posted by u/Independent_Owl_8341 • • 0 points • 4 comments

This is a message from a person on a petition (not me) to give you the context :

As a concerned citizen, I am deeply worried about the future of our environment and our workforce in Australia.

Artificial Intelligence (AI) promises to bring technological advancements, but at what cost? I dream of a future where clean drinking water is not a luxury, where stable jobs are accessible to everyone, and where our children can thrive in a healthy environment.

I want my children and their children to experience a world where our animals, plants, and ecosystems flourish, not perish. The rapid adoption and reliance on AI are setting us on a path that could have irreversible effects.

AI technologies are predicted to cause significant job displacement, leading to economic instability. According to a study by the OECD, 36% of jobs in Australia are at high risk of automation, threatening the livelihoods of millions of workers. Entire communities could face economic devastation, particularly in industries like manufacturing, transportation, and services.

Beyond economic impacts, the environmental consequences of AI are alarming. The development and operation of AI systems require vast amounts of energy and resources. A report from the University of Massachusetts highlighted that training a single AI model can emit as much carbon as five cars in their lifetime. This energy consumption accelerates climate change and depletes our natural resources, worsening issues like water scarcity and air pollution.

The solutions lie not in halting progress but in steering it towards sustainability. We urge the Australian government to implement stringent regulations that curtail the over-reliance on AI and to shift focus towards sustainable technologies and practices that will protect our environment and secure our jobs. Investing in green solutions, bolstering upskilling programs, and supporting sectors that prioritize environmental health over unrestrained technological growth should be at the forefront of national policy.

By making conscious choices today, we can secure a stable and healthy future. Join me in taking a stand against the unchecked use of AI technology. Let us protect our jobs, our environment, and the very future of Australia. Together, we can advocate for policies that prioritize sustainability and create a balanced, thriving society.

Please sign this petition to urge the Australian government to limit AI usage and champion a sustainable future for all

> A report from the University of Massachusetts highlighted that training a single AI model can emit as much carbon as five cars in their lifetime.

There are 20 million cars in Australia alone. "as much carbon as five (not 50, not 500, not 5 million - FIVE) cars in their lifetime" sounds like a case for AI.
