

Anties, ai bros, for love of god, can someone tell me what the heck is water argument all about

Posted by u/Axi_uwu • 0 points • 61 comments

I feel out of loop i keep hearing ai is draining ton of water then i hear that's not true and it leads to bowhere. Unlike subjective stuff on this debate this thing should be pretty clear if we have any data on it yet people argue about it. What is going on with it?

Im curious what these people say about watering our lawns...

u/AroISazir • 1 points • 2026-03-23 12:37 UTC

This is the best analysis of the issue i've read.

<https://blog.andymasley.com/p/the-ai-water-issue-is-fake>

Feels wrong to link it because it agrees with me, but it really took the numbers into account to get to those conclusions and i cant find no fault in the research done there.

One side thinks people should be free to use whatever tool they want to use, the other side wants to harass and murder anyone that uses AI

u/Empty-Weird5719 • 0 points • 2026-03-23 01:19 UTC

Ai data centers are using fresh water that people, farmland, and natural habitats use when they could just use waste water that had been treated.

u/KinneKitsune • 3 points • 2026-03-23 00:04 UTC

It started with antis claiming every prompt uses 30 gallons of water. Aside from being absurd, it was quickly debunked. So instead of being honest, antis increased it to 300 gallons per prompt. Then it was 3,000. Then 30,000. Then 300,000. At that point, they finally gave up on outright lying, and just stuck to vague misinformation, "a lot of water", "too much water", etc

u/PlsStopBannningMe • 0 points • 2026-03-22 23:20 UTC

Datacenter needs cooling, they use water cooling, they use ton of water. People don't like amount of water being used

u/joesb • 3 points • 2026-03-23 11:47 UTC

The thing is they exaggerated the amount being used and then don't like the amount they exaggerated.

u/PrometheanPolymath • 3 points • 2026-03-22 21:23 UTC

Processors get hot when processing data. AI involves processing data. Water helps cool systems so they don't get too hot. Past that, it's arguing what kind of water cooling systems each uses, and how much of the processing comes from AI... and everyone disagrees on those numbers.

u/Human_certified • 6 points • 2026-03-22 19:04 UTC

A combination of people being bad at math (they hear "hundreds of billions of liters" and freak out, when humanity actually uses *millions* of billions of liters each year) and a deep, irrational sense that the hated AI should not be "guzzling" precious water that gives us life.

Just read this:

<https://blog.andymasley.com/p/the-ai-water-issue-is-fake>

The man is a committed vegan, environmentalist, not an AI shill. He'll happily correct any errors you may find.
