AI Water Use

Interactive Report and LLM/diffusion "water cost" calculator tools:

[Report Link - <https://bra-khet.github.io/ai-water-use-report-1/>](<https://bra-khet.github.io/ai-water-use-report-1/>) |

[LLM Prompt Calculator - see how much water your prompts actually use\]](<https://bra-khet.github.io/ai-water-use-tool-1/>)

[Image/Video-Gen Calculator - see how much water AI gem machines actually use\]](<https://bra-khet.github.io/ai-water-use-tool-2/>)

tl;dr:

- * this one's just for my pros

- * AI's water use is mainly a **power** issue, not a cooling issue. And it really isn't an issue compared to other things like farming, golf courses, etc.

- * Image and video use decent amounts of power, but local is much better, this will improve the in the future, and it's still barely anything. You'd have to spend \$100's in credits to use a few gallons of water.

- * Mainly just an issue in a few places, but those places do have issues

If you want to find out more I suggest you read the report, it's fairly detailed but still digestible. I included as much as I could in the images.

My goal is to inform both sides and I hope we all see that AI directly accelerates fixing these problems of sustainable agriculture and energy grids. AI is the best tool we have for the job to do this.

Responsible and informed development, and responsible and informed use, makes AI's transformative power far outweigh the costs in my opinion. I hope we can get the anti-AIs to help us actually build a future where they don't have to worry about these overblown,

relatively small issues, when there are real issues we need to fix.

Also I didn't really like a couple of the conclusions in this report... but I do think they're representative of the truth. If you see anything you think is straight up false please let me know. I obviously did my best with Gemini and Claude but everyone makes mistakes so just lmk. Also I explain more stuff on my homepage on the github pages if you want to learn more about the report or whatever.

^(Made with Claude Code & Gemini Deep Research btw, brought to you by the entire Mississippi River)
