

Meta orders 10 gas-fired power plants for its Hyperion AI campus in rural Louisiana—more than triple the initial plans

Posted by u/fortune • • 0 points • 72 comments

Meta will pay for a total of 10 gas-fired power plants—enough to power more than 5 million homes—to electrify its rapidly expanding plans for its massive AI data center complex in northeastern Louisiana, dubbed Hyperion.

Meta's agreement with New Orleans-based Entergy, announced March 27, is to build and finance seven new power plants in Louisiana. That comes on top of plans approved last year to build three gas power plants for the sprawling AI hub.

The 10 power plants with 7.5 gigawatts of capacity would represent a more than 30% increase to Louisiana's entire grid capacity, not even counting up to 2.5 gigawatts of renewable energy capacity, including battery storage, that Meta also agreed to help fund.

Meta initially announced plans for a \$10 billion investment in December 2024 for a 2,250-acre data center campus in northeastern Louisiana in rural Richland Parish. But Meta recently, and quietly, acquired an additional 1,400 acres, as Fortune reported in February.

Great! Let's burn the earth to make fake videos.

u/gpearce52 • 12 points • 2026-03-31 11:49 UTC

Should be required to use solar and wind, not add to the pollution.

u/SirGuelph • 9 points • 2026-03-31 10:27 UTC

Why the hell wouldn't meta use its vast resources to build it with green energy? Is it because they don't give a fuck? No answer needed

u/[deleted] • 1 points • 2026-03-31 15:59 UTC

u/Prestigious-Smoke511 • -4 points • 2026-03-31 11:41 UTC

No one ever gave a fuck about green energy. That was always a branding thing to make leftists feel empowered.

u/TheCh0rt • 2 points • 2026-04-01 04:12 UTC

What are you talking about? All other counties are finding ways to do this with renewable

u/ArgusRidingMaturin • 1 points • 2026-03-31 19:50 UTC

Or you are parroting the talking point from those who seek to lose the most from switching to renewables. Which seems more likely?

u/Prestigious-Smoke511 • -1 points • 2026-03-31 20:13 UTC

I'm following people actions. I always have. Green energy was always talk.

u/PristineMonk5314 • 2 points • 2026-03-31 22:56 UTC

Green energy is suppressed by fossil fuel industry through political lobbying.

You follow idiot's actions.

u/Adept-Pangolin1302 • 3 points • 2026-03-31 06:57 UTC

What is the renewables solution to ever increasing consumption?

u/CriticalUnit • 3 points • 2026-03-31 09:40 UTC

MOAR renewables and storage.

u/Cominginbladey • 1 points • 2026-04-02 01:46 UTC

And lots of transmission

u/CriticalUnit • 1 points • 2026-04-02 07:14 UTC

Not as much as you'd think if you build in the right places

u/Cominginbladey • 1 points • 2026-04-02 14:06 UTC

Agree. But in the RTOs there is not always great coordination between transmission planning and generation interconnection, and on a national scale we have no unified strategy to design the most efficient system.

u/cmng1980 • 0 points • 2026-03-31 09:32 UTC

Renewables are supplemental, they're not steady/reliable enough to be the main energy source.
