

How many GPU are needed to power chatgpt ?

Posted by u/Sebisquick • 0 points • 1 comments

I find a news claimed that chatgpt use 10000 gpu. But it do not mention how it was counted. I just wonder how can 10000 gpu serve 100mil users?

It does not matter how many users download an app. What matters is how many users sends a request at the same time (aka concurrent users) . We could assume there is only 10k messages being sent by users every second. That is why chatgpt only need 10k gpu to handle all of them in parallel.
