AI's overuse of water & electricity (ChatGPT, Siri, Alexa, Google, etc...)

Posted by u/beaniesandbootlegs • 0 points • 99 comments

electricity bills will go up thanks to AI data centers using up so much energy. clean accessible water will become even MORE scarce for people who already struggle to access it, because AI requires clean water to operate. each query gulps over the amount of a bottle of water. just things to keep in mind.

personally i haven't been using them, but i'd encourage people to at the very least limit how much we use these daily appliances and be mindful about the impact it has, and where and how to stop.
