

The water demand behind AI

Posted by u/EchoOfOppenheimer • 0 points • 1 comments

Every prompt sent to an AI like ChatGPT requires powerful computers running inside massive data centers.

Is that why my water bill went up. Data centers and cooling systems.

u/PavelKringa55 • 1 points • 2025-12-24 22:05 UTC

The stupidest thing here is that they ignore the fact that there is something called "water cycle". Water is not spent, destroyed and gone. They just use it for cooling and dump it into nature, where it'll evaporate and eventually it'll be available again and again and again.

u/Leading-Adeptness235 • 1 points • 2025-12-25 04:24 UTC

Dumping it into nature seems weird.

I mean why go through all the trouble to clean the water, I presume it is distilled water, just to dump it after it got too hot.

Look even cars have water cooling systems, where the coolant is reused.

u/PavelKringa55 • 1 points • 2025-12-25 13:46 UTC

There is two cycles. Internal, that remains in the system, is purified. External that is used in cooling towers is not purified, it would be too expensive to purify. Secondary cycle is either tap water or ground water, like pumped from a river.

u/zh_victim • 1 points • 2025-12-22 23:29 UTC

So what? Water is not a rare resource. Not even clean water is. This is baseless sensationalism without context.

u/ForestBlue46 • 1 points • 2025-12-27 01:55 UTC

AI data centres are contributing to already dry conditions.
