

Shut up about how much water ai uses

Posted by u/buttsexguy17 • 0 points • 4 comments

On the low end all power plants use 812.5 trillion litres where on the high end last year all of ai used 764.6 billion liters want to know how we haven't ran out? The water cycle if you don't know what that is pick up a book and go back to grade 3.

"It's okay that nestle uses a crap ton of the water in California when they are in a drought and rationing cause the ✨ water cycle ✨ makes it all better."

This is lowkey what you sound like. Also, water cycle doesn't make the water drinkable. Much of the freshwater ends up in the sea making it saltwater. Therefore, undrinkable. And while you can't use up all the water in the world, you can use up all the drinkable water in the area. Wells can run dry and lakes can be used up.

Water cycle is not magical proccess that is everso infinite. The water in-itself may get infested and no longer be useful.

Sad how there are places where water is scarce yet so much is used for just AI

u/TwitchyWinner48 • 2 points • 2026-01-02 12:43 UTC

Why did you phrase this so offensively 🤔
